North Coast Electric's DataCom Division will be hosting a fiber certification training class. Upon completion of the class and successfully passing a comprehensive test, you will receive certificates for Basic and Advanced Fiber installation training as well as BICSI credits.

BICSI CEC's:

RCDD - 14 Credits

OSP - 14 Credits

Installer/Technician - 12 Credits

Certified Trainer - 14 Credits

Course Overview:

This course is designed for technicians who desire more hands-on practical experience.

Attendees will:

- Analyze fiber optic networks
- Perform a loss budget analysis.
- Install fan-out kits on indoor/outdoor cable
- Terminate single-mode SC and multimode LC connectors and test their work.
- Perform mechanical and fusion splicing and install their work in splice trays.
- Test system performance using an OTDR

At the conclusion of the classroom instruction and hands-on labs, a written exam will be administered.

Value Position:

- NECA/FOA 301 Compliance and Implementation
- TIA-TSB-140 Compliance and Implementation
- Shorten installation time, leading to significant cost savings
- Better trained fiber optic technicians
- Quality installations and restorations

Class Tuition:

Basic & Advanced combo training course **\$750.00** per technician
which includes: Certification & Testing

All Class Tuition is Non-Refundable and Cannot be Cancelled
